

From 100M Fiber to 1000M Fiber Migration in Southern Germany Universities

To cope with future traffic bottleneck, Universities in southern Germany decide to migrate their network infrastructure from 100M to 1000M with Lantech's LGS-1108C and LGS-1104 that support 8 ports of Gigabit switch and 4 ports of Gigabit switch with one Gigabit SFP for fiber uplink with University's fiber trunk. "Lantech's switches provide Web managed function for easy maintenance and setup, and their compact size design is most suitable to place in different locations inside University, so we are able to help University to complete their migration plan to 1000M network" said Mr. Wolfgang in T company, an experienced installer for over 10 years. Please refer to the following application drawing of University network:
