

LANTECHCOM GLOBAL WON THE MILITARY PROJECT IN SOUTH ASIA REGION

FEB, TAIWAN LANTECHCOM GLOBAL announces another successful installation on 5 Army bases in Aerial Operation Headquarter in South Asia region. The application is designed to use a few hundreds of Lantech IES2206F-WDM Industrial Switches, 6 x 10/100TX + 2 x 100WDM-FX to connect with outer block Surveillance systems to ensure the video streams are able to flow back to Surveillance Control Room without failure by functioning "X-Ring" Fast Recovery less than 300ms and Dual Homing redundant path to Core switches.

"I am pleased to use Lantech IES2206F-WDM Industrial Switches together with our panorama cameras and VOIP systems because they work seamlessly with X-Ring Fast recovery function. To my impression, X-Ring could recover faster than 300ms in this big network infrastructure and the compact size design is very easy for us to place all the devices together in small outdoor area" mentioned by Mr. Baramug of D company.

The application of 5 Army bases in this Military project is as follows:
