Lantech Industrial Switches are Successfully Implemented in East Europe Surveillance for Security Application

July, 2009

Lantech Industrial Ethernet Switches IES-2307C , 3x Giga / 100M SFP + 7x10/100M TX SNMP switch are mass-deployed in the police security project together with world-leader IP CAM vendor. There are total over 1000 outdoor IP CAMs to be connected in the police surveillance network and via Lantech Industrial Ethernet Switches, the surveillance network is securely guarding people's property 24/7 non-stop.

"We choose Lantech Industrial Ethernet Switch because Lantech Industrial Switch are proven by the market and with many international and big organization user experience, also, the IES-2307C are designed with more relay contacts to receive additional signals like "door open" and then send SNMP traps out. Plus, it works seamlessly with Cisco switch under PVST function" said Mr. David at L company, a system integrator. "In particular, we like the Ring recovery less than 10ms in which it enhances network stability a lot"
